

- 
- c. one or more lids removeably coupled to the paint compartments having an outer side, an inner opposite side and an aperture located through the lid from the outer side to the inner opposite side;
 - d. a stirring mechanism removeably coupled to the outer side of the lids having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the aperture in the lids to extend into the paint compartment; and
 - e. a fan apparatus removeably coupled to the rod of the stirring mechanism on the inner opposite side of the lids.
-

27. (Twice Amended) A reusable paint container comprising:

- 
- a. a body having a first side, a second side, and a plurality of integral paint compartments, each of the paint compartments having a front, a back, a planar first side and a planar second side, wherein an interior of the paint compartments has a sloped area and a reservoir area, wherein the reservoir area includes a centrally located circular depression having a hole located in the center of the circular depression, wherein the hole is for coupling a spigot assembly to the paint compartment;
 - b. one or more lids removeably coupled to the paint compartments each having an outer side, an inner opposite side and an aperture located through the lid from the outer side to the inner opposite side;
 - c. a stirring mechanism removeably coupled to the outer side of the lids having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the aperture in the lids extending into a corresponding paint compartment; and
 - d. a fan apparatus removeably coupled to the rod of the stirring mechanism on the inner opposite side of the lid.
-
